---

1 **The Queen of SIMs [mobile phones]**
Josifovska, S.;
IEE Review , Volume: 50 , Issue: 1 , Jan. 2004
Pages:26 - 27

[Abstract]   [PDF Full-Text (245 KB)]   **IEE JNL**

---

2 **Mobility and security management in the GSM system and some proposed future improvements**
Mehrotra, A.; Golding, L.S.;
Proceedings of the IEEE , Volume: 86 , Issue: 7 , July 1998
Pages:1480 - 1497

[Abstract]   [PDF Full-Text (300 KB)]   **IEEE JNL**

---

3 **Overview of the GSM system and protocol architecture**
Rahnema, M.;
Communications Magazine, IEEE , Volume: 31 , Issue: 4 , April 1993
Pages:92 - 100

[Abstract]   [PDF Full-Text (1004 KB)]   **IEEE JNL**

---

4 **Toward SSL integration in SIM SmartCards**
Badra, M.; Urien, P.;
Wireless Communications and Networking Conference, 2004. WCNC. 2004
IEEE , Volume: 2 , 21-25 March 2004
Pages:889 - 893 Vol.2

[Abstract]   [PDF Full-Text (367 KB)]   **IEEE CNF**

---

5 **SIM-based subscriber authentication for wireless local area network**
Yuh-Ren Tsai; Cheng-Ju Chang;
Security Technology, 2003. Proceedings. IEEE 37th Annual 2003 International
Carnahan Conference on , 14-16 Oct. 2003
Pages:468 - 473

[Abstract]   [PDF Full-Text (1506 KB)]   **IEEE CNF**

6 **Removable user identity module (R-UIM) for ANSI based third generation systems**
Ohashi, M.; Nemoto, T.; Suzuki, K.; Kudo, M.;
Vehicular Technology Conference Proceedings, 2000. VTC 2000-Spring Tokyo.
IEEE 51st , Volume: 3 , 15-18 May 2000
Pages:2334 - 2338 vol.3

[Abstract]   [PDF Full-Text (328 KB)]   **IEEE CNF**

7 **Authentication and key generation for mobile IP using GSM authentication and roaming**
Haverinen, H.; Asokan, N.; Maattanen, T.;
Communications, 2001. ICC 2001. IEEE International Conference on , Volume
8 , 11-14 June 2001
Pages:2453 - 2457 vol.8

[Abstract]   [PDF Full-Text (400 KB)]   **IEEE CNF**

8 **Network functions and signalling for personal roaming between digi cellular standards**
Uchiyama, Y.; Nakamura, H.; Yabusaki, M.;
Universal Personal Communications. 1995. Record., 1995 Fourth IEEE Interna
Conference on , 6-10 Nov. 1995
Pages:447 - 451

[Abstract]   [PDF Full-Text (364 KB)]   **IEEE CNF**

9 **International standards on universal personal telecommunications: of the art and future projections**
Arndt, G.; Gatti, N.; Lavagnolo, R.;
Universal Personal Communications, 1992. ICUPC '92 Proceedings., 1st
International Conference on , 29 Sept.-1 Oct. 1992
Pages:03.01/1 - 03.01/5

[Abstract]   [PDF Full-Text (488 KB)]   **IEEE CNF**

10 **Potential fraudulent usage in mobile telecommunications networks**
Yi-Bing Lin; Ming-Feng Chen; Rao, H.C.-H.;
Mobile Computing, IEEE Transactions on , Volume: 1 , Issue: 2 , Apr-Jun 200:
Pages:123 - 131

[Abstract]   [PDF Full-Text (684 KB)]   **IEEE JNL**

11 **Improving mobile authentication with new AAA protocols**
Kim, H.; Afifi, H.;

Communications, 2003. ICC '03. IEEE International Conference on , Volume: 1 , 11-15 May 2003
Pages:497 - 501 vol.1

[Abstract]   [PDF Full-Text (649 KB)]   **IEEE CNF**

1 Content-triggered trust negotiation
Adam Hess, Jason Holt, Jared Jacobson, Kent E. Seamons
August 2004 **ACM Transactions on Information and System Security (TISSEC)**, Volume 7 Issue 3
Full text available: 🔲 pdf(815.36 KB)   Additional Information: full citation, abstract, references, index terms

The focus of access control in client/server environments is on protecting sensitive server resources by determining whether or not a client is authorized to access those resources. The set of resources is usually static, and an access control policy associated with each resource specifies who is authorized to access the resource. In this article, we turn the traditional client/server access control model on its head and address how to protect the sensitive content that clients disclose to and r ...

Keywords: Trust negotiation, access control, authentication, credentials

2 Nomadic radio: speech and audio interaction for contextual messaging in nomadic environments
Nitin Sawhney, Chris Schmandt
September 2000 **ACM Transactions on Computer-Human Interaction (TOCHI)**, Volume 7 Issue 3
Full text available: 🔲 pdf(648.76 KB)   Additional Information: full citation, abstract, references, citings, index terms

Mobile workers need seamless access to communication and information services while on the move. However, current solutions overwhelm users with intrusive interfaces and ambiguous notifications. This article discusses the interaction techniques developed for Nomadic Radio, a wearable computing platform for managing voice and text-based messages in a nomadic environment. Nomadic Radio employs an auditory user interface, which synchronizes speech recognition, speech synthesis, nonspeech audio ...

Keywords: adaptive interfaces, contextual interfaces, interruptions, nonspeech audio, notifications, passive awareness, spatial listening, speech interaction, wearable computing

3 Copy detection mechanisms for digital documents
Sergey Brin, James Davis, Héctor García-Molina
May 1995 **ACM SIGMOD Record , Proceedings of the 1995 ACM SIGMOD international conference on Management of data**, Volume 24 Issue 2

Full text available: pdf(1.51 MB)   Additional Information: full citation, abstract, references, citings, index terms

In a digital library system, documents are available in digital form and therefore are more easily copied and their copyrights are more easily violated. This is a very serious problem, as it discourages owners of valuable information from sharing it with authorized users. There are two main philosophies for addressing this problem: prevention and detection. The former actually makes unauthorized use of documents difficult or impossible while the latter makes it easier to discover such activity.I ...

4 Content management: Dynamic program insertion in high quality video over IP

Taehyun Kim, Jack Brassil

June 2003 **Proceedings of the 13th international workshop on Network and operating systems support for digital audio and video**

Full text available: pdf(269.10 KB)   Additional Information: full citation, abstract, references, index terms

We introduce an overlay network architecture and signaling mechanism that permit program insertions in live, high quality video streams transmitted over IP networks. We describe the implementation of an application proxy that dynamically inserts pre-recorded video programs into NTSC D1 quality Motion-JPEG streams with no visible artifacts. As increases in computing power further enable the modification of video during transport, new services such as personalized commercial advertisement insertio ...
Keywords: content delivery networks (CDNs), digital television (DTV), multimedia signaling, program and system information protocol (PSIP), program cues, real-time transport protocol (RTP), video streaming

7 An innovative design approach to build virtual environment systems

M. Oliveira, J. Crowcroft, M. Slater

May 2003 **Proceedings of the workshop on Virtual environments 2003**

Full text available: 📄 pdf(781.01 KB)   Additional Information: full citation, abstract, references, index terms

A Virtual Environment (VE) presents a complex problem with interesting non-trivial challenges for software development. The majority of existing systems supporting VE are based on monolithic architectures, making maintenance and software reuse difficult at best. When a novel concept or idea requires implementation, it is not possible to extend an existing system by replacing or incrementing the necessary functionality. This leads to a

proliferation of VE systems.This paper identifies some of the ...

Keywords: component frameworks, java, online games, system design, virtual environments, virtual reality

8 A model for the local area of a data communication network software organization

P. T. Wilkinson

October 1969 **Proceedings of the first ACM symposium on Problems in the optimization of data communications systems**

Full text available: pdf(1.31 MB)   Additional Information: full citation, abstract, references, citings, index terms

A general purpose store-and-forward data communication network is under development at NPL. The background to this work is described in companion papers(1)(2) which also detail the hardware environment in which the software of the central message switching computer (MSC) operates. A user of this system sees it as a star-connected network by means of which his terminal may exchange data with any other terminal via the MSC. Because this centre is stored-program ...

9 Simulation via implementation with applications in computer communication

Kenneth Brayer, Valerie Lafleur, Gary Simpson

March 1982 **Proceedings of the 15th annual symposium on Simulation**

Full text available: pdf(1.39 MB)   Additional Information: full citation, abstract, index terms

The traditional approach to performing discrete digital simulation has been one of developing a mathematical or statistical model to represent a process, programming this model on a large scale computer, and then executing the model to obtain performance results. In this study, the authors have developed a simulation of a computer communication network by simulating the users in a central computer and implementing the remainder of the network in actual network processors. This allows for au ...

10 PLI workshops: World-class product certification using Erlang

Ulf Wiger, Gösta Ask, Kent Boortz

December 2002 **ACM SIGPLAN Notices**, Volume 37 Issue 12

Full text available: pdf(195.51 KB)   Additional Information: full citation, abstract, references, index terms

It is now ten years ago since the decision was made to apply the functional programming language Erlang to real production projects at Ericsson. In late 1995, development on the Open Telecom Platform (OTP) started, and in mid 1996 the AXD 301 project became the first user of OTP. The AXD 301 Multi-service Switch was released in October 1998, and later became "the heart of ENGINE", Ericsson's leading Voice over Packet solution.In those early days of Erlang programming, high-level tools for develo ...

12 Papers: Wireless data communications using DECT air interface
António Muchaxo, Alexandre Sousa, Nuno Pereira, Helena Sarmento
April 1999 **ACM SIGCOMM Computer Communication Review**, Volume 29 Issue 2
Full text available: pdf(1.25 MB)   Additional Information: full citation, abstract, references, citings

DECT is an approved ETSI standard for cordless communications, defined as a general radio access technology that can be used as the air interface to any network. In addition to the well-established voice service, it supports data communications. DECT currently addresses low bit rates, but additional modulation options have recently been included for high-speed, up to 2Mbps. In this paper, we describe the hardware and software design of an entire wireless communications system to be used in SOHO ...

13 Log-based receiver-reliable multicast for distributed interactive simulation
Hugh W. Holbrook, Sandeep K. Singhal, David R. Cheriton
October 1995 **ACM SIGCOMM Computer Communication Review , Proceedings of the conference on Applications, technologies, architectures, and protocols for computer communication**, Volume 25 Issue 4
Full text available: pdf(1.44 MB)   Additional Information: full citation, abstract, references, citings, index terms

Reliable multicast communication is important in large-scale distributed applications. For example, reliable multicast is used to transmit terrain and environmental updates in distributed simulations. To date, proposed protocols have not supported these applications' requirements, which include wide-area data distribution, low-latency packet loss detection and recovery, and minimal data and management over-head within fine-grained multicast groups, each containing a single data source.In this pa ...

14 A periodic Ada control kernel (PACK)
J. Ellis
January 1989 **Proceedings of the conference on Tri-Ada '89: Ada technology in context: application, development, and deployment**
Full text available: pdf(1.29 MB)   Additional Information: full citation, abstract, references, index terms

Numerous sources have questioned Ada's sufficiency in efficiently handling systems with predominantly periodic processes, especially when hard deadline scheduling is required. Several possible implementations have been suggested to address this problem. This paper describes a dual MIL-STD-1750A cockpit digital map display system which uses a Periodic Ada Control Kernel (PACK) to directly control execution of numerous periodic processes written in Ada. The PACK runs over the normal Ada Runti ...

15 Technical papers: software understanding: Tools for understanding the behavior of telecommunication systems
André Marburger, Bernhard Westfechtel
May 2003 **Proceedings of the 25th International Conference on Software Engineering**
Full text available: pdf(2.23 MB)   Additional Information: full citation, abstract, references
Publisher Site

Many methods and tools for the reengineering of software systems have been developed so far. However, the domain-specific requirements of telecommunication systems have not been addressed sufficiently. These system are designed in a process- rather than in a data-

centered way. Furthermore, analyzing and visualizing dynamic behavior is a key to system understanding. In this paper, we report on tools for the reengineering of telecommunication systems which we have developed in close cooperation wi ...

Is this a "Fast & Focused" Search Request? (Circle One)   YES   NO

A "Fast & Focused" Search is completed in 2-3 hours (maximum). The search must be on a very specific topic and meet certain criteria. The criteria are posted in EIC2100 and on the EIC2100 NPL Web Page at http://ptoweb/patents/stic/stic-tc2100.htm.

What is the topic, novelty, motivation, utility, or other specific details defining the desired focus of this search? Please include the concepts, synonyms, keywords, acronyms, definitions, strategies, and anything else that helps to describe the topic. Please attach a copy of the abstract, background, brief summary, pertinent claims and any citations of relevant art you have found.

On a Subscriber Identity Module (SIM) card I need to find an identifier (flag) that identifies the presence of an email address which is stored in a seperate field in the SIM card.

if this helps - it is for contact information in a cell phone

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 20020099846	A1		14	G06F-015/16	

Abstract (Basic): US 20020099846 A1
      NOVELTY - A number of bytes of memory space is allocated to a field
  in an abbreviated dialing number (ADN) record (74) and an **e - mail**
  address is stored in the field. A flag indicating the presence of the
  e - mail address, is set in another field of the ADN record.
      USE - For storing **e - mail** address within an ADN record of a **SIM**
  card.
      ADVANTAGE - Allows for storage of **e - mail** addresses on the **SIM**
  card along with other subscriber specific parameters and data. Enables
  an **e - mail** address to be easily associated with an existing contact
  that already has a phone number stored on the **SIM** card, thus all
  existing **SIM** cards that contain ADN and extension (EXT) records can
  be used to store **e - mail** addresses. Permits transparent backward
  compatibility with existing mobile stations that are not equipped to
  identify and display **e - mail** address information.
      DESCRIPTION OF DRAWING(S) - The figure shows the ADN record storage
  allocation for **e - mail** addresses.

GB 2363358   B   B42D-015/10

Abstract (Basic): GB 2363358 A
      NOVELTY - Wolfdales Wordwide Club Identity and Shop Discount Card
   includes name, telephone number, **e - mail** address, signature,
   National Insurance number, and date of birth of the cardholder, in the
   form of a barcode.
      DETAILED DESCRIPTION - Wolfdales Wordwide Club Identity and Shop
   Discount Card includes name, telephone number, **e - mail** address,
   signature, National Insurance number, and date of birth of the
   cardholder. This information can be read by a magnetic strip, barcode,
   checkered board code, checkered board code hologram, smart
   card-microchip, compact disc (CD), CD-read only memory, hologram, laser
   readable, hologram picture, magnetic chip, CD swipe, thumb print, **sim**
   recognition of fingerprint, recognition of eye pattern, retina scan,
   aura scan, scan facial definition points, smart **sim** , silicon chip,
   body scan, or radio wave.
      USE - The card is used as, e.g. a credit/debit card, door key for
   residential and commercial properties, passport, driver's license
   (claimed), or anti-violent scheme card for public locations (e.g.
   nightclubs, pubs or football grounds).
      ADVANTAGE - The inventive card can reduce under age purchases of,
   e.g. alcohol and cigarettes, as well as queues at, e.g. petrol stations
   and banks. It can also protect areas having restricted access against
   intruders. Thus, it is the catalyst for change and the key for
   technology.
      DESCRIPTION OF DRAWING(S) - The figure is the design of the
   inventive Wolfdales Worldwide Club Identity and Shop Discount Card.

Abstract (Basic): DE 20018125 U1

NOVELTY - The system consists of mobile communications modules, such as GSM-, GPRS-, or CDMA modules, and a PC. The PC includes a circuit board, on which a central processing unit and memory components are housed, a diskette- and a hard disk drive, and interface cards which can provide additional functions, such as internet, **E - mail** . The PC further includes a **SIM** card of the mobile communications service provider, which serves for an identification, call provision, and registration, a radio transmission/reception module included in the GSM module, an input instrument, such as a keyboard and mouse, and three power supply parts.

USE - None given.

ADVANTAGE - Provides extended communications function and improved data transmission security.

DESCRIPTION OF DRAWING(S) - The figure shows an arrangement according to the invention.

Abstract (Basic): WO 200120565 A1
    NOVELTY - Data may be loaded into a **smart   card** from **e - mails**
sent over the Internet telecommunication network by using fixed
terminals or personal computers which are equipped with card read/write
facilities or alternatively double slot **mobile   telephones** . **E -
mails** which contain **smart   card** data are **identified** either from
the originating address or from an electronic signature, the data is
then extracted and loaded into the **smart   card**
    USE - To load data into a **smart   card**
    ADVANTAGE - The system enables data to be loaded into a **smart
card** through a telecommunication network at very low cost

Abstract (Basic): DE 19940649 A1
    NOVELTY - The device has a computer, a modem, a text checker with
an LCD display and keyboard function, a GPS receiver, a **chip   card**
reader and a static or **mobile   telephone** that provides a data file
to be sent or a telephone message with a combination of a personal
electronic signature or password as a digital signature or watermark
and a GPS signal for location and time determination as a digital seal
or watermark, whereby biometric characteristic identification fields of
and other data or programs are stored on the **chip   card** ..
    USE - For both telephony and electronic signing.
    ADVANTAGE - Enables both telephony and electronic signing with
positive caller **identification** without sending a data file such as an
· **e - mail** and also addition of an accurate time and location statement
as a digital seal.

Abstract (Basic): WO 9917230 A1
     NOVELTY - A processor (8), in response to the receipt by a request
message receiver of one of the request messages, retrieves from a first
database (4) an object information related to the object identified by
the identifier included in the one of the request messages. The
processor generates an information message, which includes the object
information retrieved from the first database (4), and sends the
information message to the information receiving address selected by
the user.
     DETAILED DESCRIPTION - The user U is a registered user of the
system. At the Internet site, he has registered the **SIM** -card number
of his mobile phone as his unique user identity UUI, his name, and two
information receiving addresses e.g., his **e - mail** address at his
office (IRA 1) and his private **e - mail** address (IRA 2). He has also
registered a user profile UP, which includes his preferred language,
which is English.
     INDEPENDENT CLAIMS are included for:
     (a) a device for requesting information regarding an object
     (b) a method for requesting information relating to a tangible
object
     (c) a product which is marked by a code
     (d) a computer readable medium which is stored a computer program
     USE - The invention relates to a message information system and
different devices, products, methods and systems to be used in a
message information system.
     ADVANTAGE - The invention enables an information seeker to request
information in a simple way. A second object is to enable an
information provider to distribute information in a simple way

DESCRIPTION OF DRAWING(S) - The drawing is a schematic view of an
information system
    private **e** - **mail** address (IRA 2)
    information receiving addresses (IRA 1)
    user devices (2)
    first database (4)
    information receivers (5)
    processor (7)
    processor (8)
    user (U)

                           ABSTRACT
PROBLEM TO BE SOLVED: To provide how to use a portable two-way
communication system capable of making data transfer and personal
communication.

SOLUTION: This **portable   communication** system includes a housing 11 in
which many components capable of making two-way communication including
data transfer and personal communication are housed. These components are a
 smart   card sensor 18 that can be selectively operated, a display device
12, a mobile electronic data communication body that sends/receives
communication data, and a data transaction processing means 20 that makes
data communication with the **smart   card** sensor, the display device and
the data communication body. The **portable   communication** set 10 includes
a microphone 13. The processing means 20 is programmed to recognize
conversations and receives a signal generated from the microphone. The
processing means 20 generates a text in response to the signal and the
 mobile data **communication** body transmits the text to a remote site. The
text is part of an **electronic   mail** message sent by this set.

Abstract (Basic): US 6792536 B1
NOVELTY - The system has an appending unit that appends date and time retrieved from a trusted time source to a saved file. A signing unit signs the file with the date and the time. A hashing unit hashes the signed file to produce a digest. Signing unit (660) signs the digest with a key to produce a certificate. Appending unit (680) appends the certificate to the saved file. A saving unit (690) saves the file with the certificate.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a method of maintaining trust in the content of a digital data file.

USE - Used for proving dates in a digital data file that are utilized by general purpose computer, mainframe, PC, web browser, **e - mail** client, **e - mail** server, network file and messaging server, Internet appliance, **wireless telephone** , pager, personal digital assistant (PDA), fax machine, digital still or video camera, digital voice or video recorder, digital copier or scanner, and interactive television.

ADVANTAGE - The saving unit saves the file with the appended certificate, hence proves the dates of digital data files, thereby preventing fraud in digital data files.

DESCRIPTION OF DRAWING(S) - The drawing shows a block diagram that illustrates a **smart card** system.
Trusted local time source (610)

US 20030066892	A1		22	G06K-007/10	

Abstract (Basic): US 20030066892 A1
NOVELTY - A **mobile communication** system has a reader mechanism which reads the text, audio and video information stored in an **integrated circuit** (IC) chip and/or bar code of a poster. The read information is then displayed.

USE - For reading text information such as telephone number, facsimile number, domain information such as **e - mail** address, uniform resource locator (URL) on Internet, written in display structure such as ordinary poster installed in stations, roads, waiting

rooms and lobbies, sign boards provided on rooftops of buildings or walls, timetables at stations or bus stops, statements of virtues and spas, paper advertisements such as newspapers or magazines, picture post cards, cards, handbills, original equipment manufacturer (OEM) commodities such as tissue papers and advertisements hung down in trains. Also for reading image information such as map or photograph and audio information such as music or voice guide.

ADVANTAGE - Enables transferring information read from the poster to other **mobile communication** system. Also allows to encode large amount of data efficiently into a two-dimensional bar code of the poster.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart illustrating the method of reading text information from a display structure.

pp; 22 DwgNo 1/14

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 6552582	B1		7	H03B-001/00	

Abstract (Basic): US 6552582 B1

NOVELTY - The P-channel transistors (202,204) connected to common VDD (216) and complementary input terminals (220,222) have their sources connected to drains of P-channel transistors (206,208). The transistors (206,208) are connected to common VSS voltage (218) thus forming complementary output voltages (226,224). The pull-up transistors (212,214) are connected to VDD and respective one of the output voltages (226,224).

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for electronic device.

USE - For **integrated circuits**, low voltage differential signaling (LVDS) used in telecommunication, high-speed networking, **wireless telephones** -services such as **e - mail**, Internet, high-quality audio and video communications and also for other applications such as digital cameras, printers, copiers, notebook computers.

ADVANTAGE - Has low power consumption, low noise and ability to drive highly capacitive load at an output port, therefore output signals of circuit are less affected by power supply variations with reference to ground.

DESCRIPTION OF DRAWING(S) - The figure shows the circuit diagram of source follower circuit.

P-channel transistors (202,204,206,208)

```
                  pull-up transistors (212,214)

Abstract (Basic): US 20020023959 A1
       NOVELTY - A scanning unit scans a bar code for generating an
   electronic representation of the bar code. A communication unit uploads
   the representation of the bar code to user through client. A
   transmitter transmits representation of the bar code to a remote
   device.
       USE - Multifunctional bar code scanner for inventory control
   system. The scanner is also used as remote controller for door locking
   system of motor vehicle, garage, etc. Also for pager, computer system,
   microprocessor, application specific integrated   circuits ,
   programmable logic devices, wireless   telephone , PDA and electronic
     messaging  system, etc.
       ADVANTAGE - Using radio frequency signals, the information are
   transmitted easily and efficiently at high speed.
       DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
   system receiving representation of bar code.

Abstract (Basic): US 20010053975 A1
     NOVELTY - A decoder (10) decodes the received character data. A
  word divider (21) divides the decoded data into word units. A voice
  storage circuit (22) outputs the voice data corresponding to the word
  units. A digital to analog converter converts the voice data into
  analog signal (30). A speaker (40) outputs character data as voice
  based on the analog signal.
     DETAILED DESCRIPTION - The decoder decodes the received character
  data. A memory (50) stores the decoded character data. A liquid crystal
  display (60) displays the stored character data as character by certain
  amount of byte numbers. An INDEPENDENT CLAIM is also included for
  character information output method.
     USE - For receiving character information from **electronic   mail** ,
  ·character information service in **mobile   phone** , information
  providing terminal, etc.
     ADVANTAGE - Since the individual voice can be stored in the voice
  storage circuit in association with the word data, it is possible to
  hear favorite voice for character information. Since functions for the
  word division and voice storage can be realized using the **integrated
  circuit** , special hardware is not needed. Since the data rate which is
  the basis of the voice speed and the data rate for highlighting of
  characters on the LCD coincide with each other, voice data output
  coincides with highlighted character display.
     DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
  character information receiving apparatus.

KR 2001019801 A   1 G06F-015/02

Abstract (Basic): KR 2001019801 A
      NOVELTY - A name card management system is provided to enable a
   user to refer to name card information via a computer or a **mobile
   phone** and to automatically update the name card information over the
   internet.
      DETAILED DESCRIPTION - The system comprises an individual name card
   storage device(1), an intermediate server(3), a central management
   computer(2) and an internet network(4). The storage device(1) stores
   name card information of members. The central computer(2), connected to
   an **e - mail** server(5), transmits a name card data to even a
   non-member via an **e - mail** to update the **stored** name **card**
   information. The members can access the intermediate server(3) by a
   mobile   phone or a personal computer and search for a wanted name
   card information over the internet. An updated information is input in
   the individual name card storage device(1) via the central management
   computer(2), and also automatically notified to the individual name
   card storage device(1) of other members.

JP 2003526283 W   17 H04L-009/32   Based on patent WO 200167712

Abstract (Basic): NL 1014328 C2
       NOVELTY - Information provided by the sender is forwarded by a
   computer to the sender in the form of a message, following which the
   sender encrypts the message and forwards it to the receiving party, who
   compares and checks the message using an application program.
       DETAILED DESCRIPTION - The sender uses at least one application
   program operating on at least one computer connected to the public
   network to input information that needs to be forwarded and secured.
   The information is packaged into at least one secure message for
   decryption. An INDEPENDENT CLAIM is also included for the apparatus
   used to send secure messages using this method.
       USE - None given.
       ADVANTAGE - End-to-end encryption is possible due to a simple and
   collison-resistant BCF (basalt contract function), the method uses a
   thin signature client, enabling it to be implemented not only in PCs
   but also in small devices such as **mobile   phones** or ·smart - cards ,
   and (multiple) remote signing is possible. Unlike fat client methods,
   one signs for what one sees (WYSIWYS). Data can be converted so long as
   the BCF is collision-resistant and the representation of the HRD (human
   readable data) is flexible, e.g. possible in table form.

Abstract (Basic): JP 2000312382 A
        NOVELTY - The individual authentication information extracted from
    IC   card (1001), is communicated to portable terminal (1000). The
    information is transmitted and received between card and terminal, only
    when the ID of the terminal is recognized. The usage rights of service
    is assigned using authentication information and accordingly billing is
    performed.
        USE - For online banking service, **electronic   mail** , information
    providing service using internet.
        ADVANTAGE - As the information is communicated using **IC   card** ,
    the individual recognition of the portable terminal is performed easily
    and hence freedom of usage is improved.
        DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of
    the portable terminal and **IC   card** .

Abstract (Basic): WO 9922486 A1
    NOVELTY - The method involves transmitting a message to be signed
via a telephone network to a signing device. The signing device is a
mobile radiotelephone. The message is signed, and transmitted back to a
receiver as a signed messaged. A public key procedure is used for the
signing. The messages are transmitted using the Short Message Service
(SMS). A secret key may be entered via the telephone key-pad.
    DETAILED DESCRIPTION - DETAILED DISCRIPTION - Also claimed are a
mobile telephone and a **chip card** .
    USE - E.g. for personal computer, which sends message to an **e -
mail** server, which transmits it to a **mobile telephone** for signing.
    ADVANTAGE - The method is low-cost, and is simple to implement,
while being independent of location.

Abstract (Basic): WO 9857474 A
    The **smart** **card** stores the address of an Internet Service
Provider (ISP) and allows the address to be read by an Internet Browser
integrated in a **portable** **telephone** , so that the address can be
provided to the ISP when the card is connected. Personal Internet data
for the user is also stored in the **smart** **card** , including their user
identification and password.
    The card also stores **e** - **mail** addresses, an **e** - **mail** address
book, signatures, and includes memory for cache and for 'cookies'. A
script stored in the **smart** **card** automatically establishes the
connection to the Internet Service Provider. A micro-server built into
the card provides addressing and authentification and manages the
Internet protocol, and manages file access.
    ADVANTAGE - ADVANTAGE - Provides data exchange between **smart**
card and Internet, with integrated security to allow financial and
other transactions, and stores Internet service provider access
information and user's personal Internet data.
    Dwg.1/2

Abstract (Basic): JP 10254597 A
      The device has a movable button (1) whose movement is restricted by
   several grooves (2). The movable button is moved along the groove by
   the finger. A decision button (4) is provided which is pushed after
   selecting desired character, figure.
      USE - In **IC** **card** reader, **email** , pager.
      ADVANTAGE - Improves operativity even when size of button is
   reduced. Prevents incorrect operation.

...SPECIFICATION conceived as subscriber identifiers containing in addition to numbers also other symbols and other contact **addresses** , such as **electronic mail addresses** .

In digital mobile communication systems the user of a mobile station is identified on the basis of a **subscriber identity module** connected to the device. In this way calls to the user are switched to that mobile station which contains the user's **subscriber identity module** . Similarly, calls taken by the user are charged to the user defined by the subscriber...

  messages to an **email   address** instead of to a directory
  number can be switched on and off by the user...an interrogation of the
  new supplementary service of re-directing a multimedia
  message to an **email   address** . The definitions correspond
  basically to those relating to the unconditional call
  forwarding in the above...

...at registering possible
  re-directions of multimedia messages for the directory
  number assigned to the **SIM** of the mobile station 2. In
  this communication, a user of the mobile station 2 to this directory
  number to his/her
   email   address by providing this **email** " **address** to the
  mobile communication network 1.

  More specifically, the user first requests the service
  either...is informed by the
  mobile station 2 about the received USSD message and

enters the **email** **address** using the standard GSM alphabet.
A reply message comprising this **email** **address** is then
transmitted ...mobile
communication network 1 stores the received information
for the directory number assigned to the **SIM** in the
mobile station 2. As a result, the re-direction of
multimedia messages is...

...activated re-direction implies that any multimedia
message directed to the directory number of the **SIM** of
the mobile station 2 will not be attempted to be
delivered to a mobile...

...but will be immediately
re-directed by the mobile communicati-odnetwork I to the
indicated **email** **address** .

The second communication is aimed at activating a

  Title: Evolution of charging and billing models for GSM and future mobile internet services
  Author: Cushnie, John; Hutchison, David; Oliver, Huw
  Corporate Source: Distributed Multimedia Res. Group Lancaster University, Lancaster, United Kingdom
  Document Type: JA; (Journal Article)   Treatment: T; (Theoretical)
  Journal Announcement: 0411W1
  Abstract: The convergence of GSM networks and the examination of methods for collecting and processing the billing information are discussed. The billing data are collected via high-speed communication links using reliable data protocols such as X.25 and file transfer and management (FTAM). Using dedicated billing systems and the mobile network's charging tariffs, the collected billing data are centrally processed into subscriber invoices and bills. Though the tariffs for subscriber may become complicated, it may ultimately give the subscribers more control over the way they are charged for using the mobile voice and Internet services and the Quality of Service receive from the network operator.   Title: Digital directions: widening the educational net for information professionals
  Author: Martin, William J.; Kerrisk, John; Richards, David
  Corporate Source: RMIT Univ, Melbourne, Aust
  Document Type: JA; (Journal Article)   Treatment: T; (Theoretical)
  Journal Announcement: 0005W2
  Abstract: Facing changes to the funding base for higher education and threats of competition from outside the Library and Information Studies sector, staff in the Department of Information Management and Library Studies at RMIT sought not **sim** -ply to redesign some of its core programs but also to reposition itself for participation in an increasingly commercial environment. It designed new programs in document management at both graduate and under-graduate level. Embracing the fields of digital documents, workflow and knowledge management, two of these programs, the

Graduate Diploma in Document Management and the Master of Business
(Information Innovation), are delivered entirely on the World Wide Web. A
third the Bachelor of Business (Document Management) is taught using both
face-to-face and Intranet delivery methods. Major lessons learned from the
exercise are that Web-based delivery is much more labour-intensive than
traditional methods and that radical departures in curriculum development
will inevitably result in cultural change and conflict. (Author abstract) 7

Celcom unveils sophisticated card for customers
  MALAYSIA: CELCOM WHIZZ32 **SIM** CARD UNFURLED
New Straits Times (XAS)   06 Oct 1999 p.21
Language: ENGLISH

With the introduction of the "Celcom Whizz32" **SIM** card, all mobile phone
subscribers of Celcom (Malaysia) Sdn Bhd could now avail of a host of data
communications services which includes Inforservice covering **e - mail** ,
teleinfo, police, hospital, hotel, airlines, airport, cabs, solat <Muslim
prayers>, bill info, stock alert. Another two new menu-driven services are
scheduled to be added into the existing 19 services offered by the Celcom
Whizz32 by end-1999 (on 19 October and beginning of November 1999).
Launched on 5 October 1999, the innovative 32k Java **SIM** card has the
capacity to store up to ten **e - mail** addresses, 30 SMS (Short Message
Service) and 255 telephone numbers. Celcom subscribers would now be
directed straight to the required services by simply selecting from the
menu, and no longer need to search and key-in a set of long instructions or
phone numbers. Users of Phase2+ compatible handsets would be able to gain
access to the menu-driven services, according to Bistamam Ramli, group
executive vice-president of TRI (Technology Resources Industries
Bhd)/Celcom.

Peoples Phone launches new services
  HONG KONG: PEOPLES PHONE OFFERS NEW PCS SERVICES
HK Economic Times (XKH)   11 Aug 1998 p.a1
Language: CHINESE

Peoples Phone has launched new PCS mobile phone services. Customers can obtain two mobile phone numbers with one **SIM** card. The monthly service charge is HK$35-70 and talk time costs HK$1 per minute. Besides, customers can identify who is calling with different ringing tones. The company is also the first PCS provider offering mobile facsimile and data services. Customers can deliver **e - mails** , facsimile, pictures, data information and on-line via Peoples Phone's PCS service and a notebook computer. The service charge of mobile facsimile and mobile data services are HK$35 a month respectively. Each transmission costs HK$1 per minute. *

   Language: English
   Document Type: JA; (Journal Article)   Treatment: G; (General Review)
   Journal Announcement: 0409W3
   Abstract: The latest technology introduced in the new breed of
cellphones in Japan are going to replace the wad of ID and credit cards
one has to carry around. NTT DoCoMo introduced four **cellphones** with built
in 'mobile wallet' capability. The technology allows user to simply move
the **cellphone** over a reader to pass through barriers at train stations
or office and pay for shopping. Users also will be able to download up to
yen 50,000 from their bank into the phone, which will burn down as it is
spent. The technology behind the idea originated in a wireless **smart
card** from Sony called FeliCa. (Edited abstract)
